SAMPLE REPORT #1 (Inclusion)
PARENTAGE/KINSHIP TEST REPORT

Case REL0000XXXX Test XXX
October 1, 2008

Summary of Findings:

We have completed a kinship analysis on samples from the individuals listed below. Based on the scientific evidence, we conclude that John Doe cannot be excluded as the biological father of Jane Doe.

Table with 5 columns: Role, Name, Race, SampleID, Draw Date. Rows include Mother (Josie Doe), Child (Jane Doe), and Alleged Father (John Doe).

Table with 8 columns: System, Allele, Allele, Allele, Allele, Allele, Allele, PI. Lists genetic markers like D3S1358, TH01, D18S51, etc.

Combined Paternity Index (PI) = 3,704,277

The observed combination of genetic markers of the involved parties is 3,704,277 times more characteristic of paternity by John Doe (IDNV), than of paternity by an untested, unrelated Hispanic man.

Genelex Corporation is accredited by the American Association of Blood Banks Parentage Testing Committee for DNA parentage testing.
