

Prescription Drug Reaction Profiles

Genelex is first in the world to offer direct-to-consumer DNA prescription drug reaction profiles that help reduce the incidence of adverse drug reactions, the fourth leading cause of death in the US. Currently offered tests are of the most important of the drug

processing enzymes. More than half the population have at least one defect in these systems which process one-third of the most commonly prescribed medicines.

Nutritional Genetic Testing

Genelex offers a screen that identifies your body's nutritional needs based on your unique genetic profile. We combine this information with a lifestyle questionnaire making dietary recommendations to ensure that your body and diet work in harmony. The test is especially important to pregnant women or women seeking to conceive as it identifies your body's unique folate needs.

DNA Safety Profiles

DNA Safety Profiles provide a permanent means of conclusively identifying a person. Photos, footprints, and fingerprints can change over time; but

a person's DNA profile remains unchanged. Obtaining a profile now gives family members the peace of mind of knowing they can identify loved ones under any circumstances. Profiles are recommended for children, people in high-risk work environments, and

people who want a method to evaluate kinship as part of their estate planning.

DNA testing pioneers since 1987

DNA PARENTAGE TESTS

Paternity testing has emotional and financial consequences that last a lifetime. Genelex DNA testing can provide the certainty you need when parentage is in question. We provide accurate, confidential, and prompt (overnight if necessary) DNA paternity testing tailored to fit your individual needs, and offer the broadest range of testing and sample collection methods available anywhere including in home, anonymous, or fully documented. We have a worldwide network of sample collection centers and offer a range of payment options.

Genelex DNA tests apply state-of-the-art technology to prove or disprove paternity in all cases. Our testing exceeds the stringent DNA testing standards set by the FBI for criminal casework and data banking. Tests we conduct include:

- Motherless—Father and child only, mother's sample not required
- Newborns—Testing either at, or soon after birth
- Pregnant Mothers—Coordinated with her physician from 8-20 weeks
- Siblings—Full, half or unrelated
- Extended Family—Testing to see if a person is a grandparent, aunt, cousin, or other relation
- Non-standard Samples—Items such as deceased samples, bones, or envelopes.

Genelex has the best people, experience and facilities available anywhere. We have a long history of high legal acceptance in complicated civil and criminal DNA paternity cases. Many of the tests we do, however, are for peace of mind and no legal issues are at stake. We understand that questions about parentage are emotionally distressing and are dedicated to providing the highest level of customer service and quickly providing conclusive answers to questions that may otherwise last a lifetime.

HOW DO I OBTAIN A DNA TEST?

Call a Genelex DNA testing specialist now. They guide you through your test every step of the way. DNA samples are collected with a painless cheek swab in your home or at one of our worldwide collection centers. Tested individuals can be in different states or even countries. Samples are sealed and tracked at every step, ensuring accurate results. In the laboratory, we analyze the DNA and provide cross-checked, verified, and notarized results in approximately 5-7 business days (1 or 3 day expedited testing available).

CAN THESE RESULTS BE USED IN COURT?

Yes, Genelex is both an accredited paternity testing and medical testing laboratory. Our DNA testing methods are accepted in courtrooms throughout the country and recognized by embassies for immigration purposes.

DO I NEED A DOCTOR'S ORDER?

No. Most of our clients order and schedule testing directly from their personal Genelex DNA testing consultant. If you want us to communicate with any involved relatives, doctors, or attorneys you must authorize us to do so.

WHAT ABOUT CONFIDENTIALITY?

Information of any kind regarding a case will not be released to anyone other than the people tested. We require written permission to release the information to representatives such as physicians or attorneys.

HOW DO I PAY FOR THE TEST?

Payment for testing can be made by cash, money order, Visa, MC, AMEX, or DISC. Payment plans are available, but results will not be released until full payment has been received.

ABOUT US

Started in 1987 Genelex is an internationally recognized leader in genetic testing. We provide the most accurate DNA testing and the best customer service available. We have completed more than 100,000 individual tests, including one affirmed by Supreme Court review. Another was key to the settlement of the \$800,000,000 Larry Hillblom estate, the largest civil paternity in history. We regularly work high profile cases and help thousands of regular Moms and Dads from around the world to resolve cases of:

- Child support and custody • Adoption • Tribal Rights • Immigration • Insurance • Inheritance

Genelex is a pioneer in the field of predictive genetics testing, offering DNA tests that enhance the health and safety of society. We are the first to offer prescription drug reaction testing directly to the public. This testing helps physicians properly prescribe medicine reducing the chance of adverse drug reactions. We also offer nutritional genetic testing that provides personalized dietary recommendations that help you keep your body working at an optimum level.

We work with a broad spectrum of agencies, people, and needs from around the world. We are pledged to deliver results without bias, to ensure that our work will be of the highest quality and will serve the best interests of our clients.
