

How Accurate is DNA Testing?

DNA Testing is the most accurate technology available for determining paternity and other family relationships. Genelex's testing proves or disproves paternity in all cases. Each report states clearly that:

- The tested man is excluded and **cannot be the biological father**.

OR

- The statistics in the report **prove that he is the biological father**.

How can I schedule Testing?

Just call your Genelex DNA Testing Consultant who will customize the arrangements for you whether you need **LEGAL** or **IN-HOME TESTING**. Specimen collection fees for legal tests are paid directly to the collection agent or facility unless other arrangements have been made. Please have your photo ID with you at the time of collection.

What about confidentiality?

Information of any kind regarding a case will not be released to anyone other than the tested parties and their named representatives without written authorization. All records are stored in a secure facility.

How long does the test take?

Reports are provided five to seven business days following receipt of all samples. **RUSH TESTING** in one day or three days can be ordered. Call now for details.

What if the tested parties live in different cities? Must they go in together?

No. We have a worldwide network of collection centers. In many locations medical personnel can come right to your home. You and your Genelex DNA testing consultant will coordinate the timing and arrangements for all tested parties.

How will I receive my test results?

Reports are mailed to all tested adults and their designated representatives. Reports can be sent by fax or e-mail if requested, but not by telephone. The report is a confidential notarized legal document that has a scientific description of the genetic patterns determined for each individual. We also include information that explains the test results in everyday language.

How do I pay for the test?

Payment for testing can be made by cash, money order, Visa, MC, AMEX, or DISC. Do not send cash with collection kits. Results will not be released until full payment has been received. Contact your DNA testing consultant about the availability of payment plans.

Is the mother always tested?

No, but if the mother is tested, the test may take less time and will provide for a higher level of statistical certainty. When the mother participates we are able to subtract her contribution to the child's DNA pattern before comparison to the tested man's.

Does the child have to be a certain age to have a DNA test?

No. We regularly test newborn infants using umbilical cord blood, an easy procedure that takes place right in the delivery room. For other young children we use cheek (buccal) swabs. In all cases, the test is painless.

Do I need a Doctor's or Lawyer's order?

No. Most of our clients order and schedule testing over the phone directly from their DNA Testing Consultant. If you want us to communicate with any involved relatives, doctors, or attorneys you must authorize us to do so.

What other types of parentage testing do you offer?

Genelex routinely performs the broadest spectrum of identity tests available today. This allows us to report results with a high level of certainty even when key family members are unavailable.

- **Pre-Natal testing** is performed on samples obtained by trained medical personnel using the amniocentesis or CVS (chorionic villus sampling) procedures. It is the responsibility of the client to seek medical advice concerning the performance of these procedures.

- **Grand Paternity** is ordered when the father is unavailable. It is a straightforward test when both of his parents are available for testing and his paternity is not in question.

- **Kinship Analysis** is more complex because relationships must be determined using fewer and more distantly related individuals, such as the child's Aunts and Uncles or Brothers and Sisters. It is possible using the most advanced testing methods to determine if two people are siblings, half-siblings or unrelated.

- **Deceased** individuals can be tested using medical, funerary, or abandoned materials. These cases are often routine or they may involve serious criminal charges and difficult-to-work-with samples. We have extensive experience and an outstanding, courtroom proven record with these cases. If the date of death is recent, **CALL IMMEDIATELY**.

Who is Genelex?

Started in 1987, Genelex is an internationally recognized pioneer in paternity testing and DNA analysis. Included in our more than 100,000 cases is a Supreme Court review of a criminal paternity case. Our testing was also key to settlement of the \$800,000,000 Larry Hillblom estate. Although many of our cases are high profile, we provide confidential testing for regular Moms and Dads everyday.
